ANSWERS AND KEYWORDS HIGHLIGHTED

IELTS Reading Paper 1: Teacher copy

60 minutes. Yellow = where the answer is. Pink = keyword in the question and the matching words in the passage (same small number). Blue tag = question number and answer.

Passage 1: The Amazing World of Bees

Bees are among the most important insects on Earth. There are more than 20,000 known species of bees in the world, and they live on **every continent except Antarctica**[1] **1: FALSE** . Most people are familiar with the honeybee, but there are many other types of bee, including bumblebees, carpenter bees, and solitary bees that live alone rather than in colonies.

Honeybees are perhaps the most well-known species because of their ability to produce honey. A single **honeybee colony**[11] can contain up to 60,000 bees, and the colony is led by a **queen**[11] bee whose only job is to **lay eggs**[11] **11: queen** . **Worker bees**[2], which are **all female**[2] **2: TRUE** , carry out most of the work in the colony. They collect nectar and pollen from flowers, build and repair the honeycomb, and take care of the young bees. **Male bees**[7], known as **drones**[7], have just one purpose — to mate with a new queen **7: C** .

One of the most remarkable things about honeybees is the way they **communicate**[8] with each other. When a worker bee finds a good source of food, she returns to the hive and performs a special movement called the **waggle dance**[38]. This dance tells the other bees the direction and distance of the food source **8: B** . Scientists discovered this communication system in the **1940s**[3] **3: TRUE** and were amazed by its complexity.

Bees play a vital role in the natural world through a process called **pollination**[9]. When a bee **visits a flower**[12] to collect nectar, pollen from the flower **sticks to its body**[12] **12: pollen** . When the bee moves to another flower, some of this pollen is transferred, allowing the plant to reproduce **9: C** . It is estimated that bees **pollinate**[4] around **one third**[4] of all the **food that humans eat**[4] **4: FALSE** . Without bees, many fruits, vegetables, and nuts would become extremely rare or disappear completely.

Unfortunately, bee populations around the world have been **declining**[5] in recent decades. Pesticides used in farming, the destruction of natural habitats, disease, and **climate change**[5] have all contributed to this problem **5: TRUE** . Scientists and **governments**[6] in many countries are now working to protect bees **6: NOT GIVEN** by reducing pesticide use, planting **wildflowers**[6], and creating protected areas where bees can thrive.

There are many simple things that **ordinary people**[10] can do to **help bees**[10]. Planting bee-friendly flowers such as lavender, sunflowers, and wildflowers in gardens provides bees with food **10: C** . Avoiding the use of pesticides in gardens removes a major threat to bees. Putting out a **shallow dish of**[13] water gives bees a place to **drink**[13] **13: water** . Even leaving a small patch of garden wild and uncut can provide important habitat for solitary bees that nest in the ground.

Do the following statements agree with the information given in the passage? Write TRUE, FALSE, or NOT GIVEN.

1. Bees can be found on **every continent in the world**. FALSE

2. **Worker bees** in a honeybee colony are **all female**. TRUE

3. The **waggle dance** was first described by scientists in the **1940s**. TRUE

4. Bees **pollinate** approximately **half** of all the **food that humans eat**. FALSE

5. **Climate change** is one of the reasons bee populations are **declining**. TRUE

6. **Governments** are paying farmers to plant **wildflowers** for bees. NOT GIVEN

Choose the correct letter, A, B, C, or D.

7. What is the main purpose of **male bees** (**drones**)?

A. To collect nectar and pollen from flowers.
B. To build and repair the honeycomb.
C. To mate with a new queen.
D. To protect the colony from enemies.

8. What information does the **waggle dance** **communicate** to other bees?

A. How much nectar is available at a food source.
B. The direction and distance of the food source.
C. Whether the food source is safe to visit.
D. The type of flower at the food source.

9. According to the passage, what happens during **pollination**?

A. Bees carry honey from one flower to another.
B. Flowers produce nectar to attract bees.
C. Pollen is transferred between flowers allowing plants to reproduce.
D. Bees build honeycombs inside flowers.

10. Which of the following is suggested as a way for **ordinary people** to **help bees**?

A. Buying honey from local beekeepers.
B. Reporting bee sightings to scientists.
C. Planting bee-friendly flowers in gardens.
D. Keeping a honeybee colony at home.

Complete each sentence with NO MORE THAN TWO WORDS from Passage 1.

11. A **honeybee colony** is led by a ___ whose only job is to **lay eggs**. queen

12. When a bee **visits a flower**, ___ from the flower **sticks to its body**. pollen

13. People can help bees by putting out a **shallow dish of** ___ for them to **drink**. water

Passage 2: The History of the Bicycle

[A] The bicycle is one of the most popular forms of transport in the world. Today, there are estimated to be over one billion bicycles in use globally — **more than the number of cars**[1818] **18: TRUE** . Bicycles are used for sport, leisure, commuting to work, and as a primary means of transport in many developing countries. They are **cheap to buy and maintain**[15] , produce no pollution, and provide good physical exercise for the rider **15: A** .

[B] The history of the bicycle is longer than many people realise. The earliest **bicycle-like device**[22] was invented by a German baron named **Karl von Drais**[1922] in 1817 **22: 1817** . His invention was a wooden frame with two wheels that the rider balanced on and pushed along the ground with their feet — there were no **pedals**[19] **19: FALSE** . This device became known as the draisine or running machine. While it was an interesting novelty, it was not very practical and soon fell out of fashion.

[C] The first bicycle with pedals appeared in France around 1860. These **early pedal bicycles**[14] had pedals attached directly to the front wheel. They were made almost entirely of iron, which made them very heavy and **uncomfortable**[14] to ride on the cobblestone roads of the time **14: C** . Because of the **bumpy ride**[23] they gave, these bicycles were **nicknamed**[23] **boneshakers**[20] **23: boneshakers** .

[D] A major improvement came in 1870 with the invention of the **penny-farthing**[20] **20: NOT GIVEN** . This bicycle had a very large front wheel and a much smaller rear wheel. The large front wheel meant that the bicycle could travel faster, because each pedal stroke moved the bicycle further. However, the penny-farthing was **dangerous**[17] and **difficult**[17] to ride **17: D** . The rider sat very high above the ground, and falling off — which happened frequently — was extremely hazardous.

[E] The modern bicycle design, recognisable to anyone today, was developed in the late 1880s. This design featured two wheels of equal size, a **chain drive**[21] connecting the pedals to the **rear wheel**[21] **21: TRUE** , and pneumatic rubber tyres. These innovations made bicycles much safer, more comfortable, and easier to ride. For the first time, bicycles became genuinely practical for everyday use by ordinary people, and cycling quickly became enormously popular across Europe and North America.

[F] Cycling has seen a significant revival in many cities around the world in recent years. Concerns about traffic congestion, air pollution, and the health benefits of exercise have encouraged both **governments**[16] and individuals to embrace cycling. Many cities have built extensive networks of cycle lanes to make **cycling safer**[16] **16: F** , and some cities now operate bicycle-sharing schemes that allow people to rent bicycles for short journeys.

Passage 2 has six paragraphs (A-F). Which paragraph contains the following information? Write the correct letter, A-F.

14. A description of why **early pedal bicycles** were **uncomfortable** to ride. **C**

15. An explanation of the **advantages** of bicycles compared to other forms of transport. **A**

16. A reference to **governments** making **cycling safer** in cities. **F**

17. A description of a bicycle that was **difficult** to ride and **dangerous**. **D**

Do the following statements agree with the information given in Passage 2? Write TRUE, FALSE, or NOT GIVEN.

18. There are currently **more bicycles** in the world than **cars**. **TRUE**

19. **Karl von Drais** invented the first bicycle with **pedals**. **FALSE**

20. The **penny-farthing** was less popular than the **boneshaker**. **NOT GIVEN**

21. The modern bicycle design uses a **chain** to connect the pedals to the **rear wheel**. **TRUE**

Complete each sentence with NO MORE THAN TWO WORDS from Passage 2.

22. **Karl von Drais** invented his **bicycle-like device** in ___. **1817**

23. Early pedal bicycles were **nicknamed** ___ because of the **rough ride** they gave. **boneshakers**

Passage 3: Chocolate: From Bean to Bar

Chocolate is one of the world's most popular foods. People across the globe consume around seven million tonnes of chocolate every year, and the global chocolate industry is worth over 100 billion US dollars annually. But despite its worldwide popularity today, chocolate has a long and fascinating history that stretches back thousands of years.

Chocolate is made from the seeds of the cacao tree, which grows in tropical regions close to the equator. The cacao tree produces large pods, and inside **each pod**[27] are between 20 and 50 **seeds**[38] **27: B** , **commonly known as**[38] **cacao beans**[27] **38: cacao beans** . These beans are the raw material from which all chocolate is made. The cacao tree requires a warm, humid climate with regular rainfall, which is why the world's main chocolate-producing countries are found in tropical regions such as West Africa, South America, and Southeast Asia. Ivory Coast and Ghana in West Africa together produce **more than half**[28] of the world's **cocoa supply**[28] **28: C** .

The history of chocolate begins with the ancient civilisations of Central America. The **Maya and Aztec**[29] peoples cultivated cacao trees and used **cacao beans**[29] to make a bitter drink mixed with spices **29: B** . For these civilisations, cacao was an extremely valuable commodity — so valuable that cacao beans were actually used as a form of currency **29: B** . Chocolate was associated with gods and royalty, and ordinary people rarely had access to it.

Chocolate was **brought to Europe**[39] by Spanish explorers **39: Spanish explorers** in the sixteenth century. At first, the European chocolate drink was very similar to the bitter Aztec version, but over time **Europeans**[30] began adding sugar and other ingredients such as vanilla and cinnamon **30: C** to make it sweeter and **more appealing**[30]. For many years, chocolate remained a luxury item enjoyed only by wealthy Europeans, as the ingredients were expensive and the preparation process was time-consuming.

The chocolate industry was transformed in the nineteenth century by a series of important inventions. In 1828, a Dutch chemist named Coenraad van Houten invented a **press**[31] that could separate **cocoa butter**[31] from roasted cacao beans **31: Coenraad van Houten** , producing a fine cocoa powder. This made chocolate cheaper and easier to produce. In 1847, a British company called Fry and Sons mixed cocoa butter with chocolate liquor and sugar to create the first solid chocolate bar. In 1875, Swiss manufacturer Daniel Peter added condensed milk to chocolate, inventing **milk chocolate**[37] — which became the world's **most popular form**[37] of chocolate **37: TRUE** .

Today, the chocolate industry faces significant challenges. Many cocoa farmers in developing countries earn very low wages and struggle with poverty. There are also **environmental**[40] concerns: the **demand for cocoa**[40] has led to deforestation in some tropical regions **40: deforestation** as forests are cleared to plant more cacao trees. Organisations working to promote fair trade chocolate aim to ensure that farmers receive fair prices for their cocoa, while sustainable farming initiatives seek to reduce the environmental impact of cocoa production.

Choose the correct letter, A, B, C, or D.

27. How many **cacao beans** does **each pod** of the cacao tree contain?

A. Between 10 and 20.

B. Between 20 and 50.

C. Between 50 and 100.

D. More than 100.

28. Which two countries produce **more than half** of the world's **cocoa supply**?

A. Brazil and Colombia.

B. Indonesia and Malaysia.

C. Ivory Coast and Ghana.

D. Mexico and Peru.

29. How did the **Maya and Aztec** peoples use **cacao beans**?

A. They ate them as a snack.

B. They made them into a bitter drink and used them as currency.

C. They traded them with European merchants.

D. They used them to make sweet desserts.

30. What did **Europeans** add to chocolate to make it **more appealing**?

A. Spices and chilli.

B. Salt and butter.

C. Sugar, vanilla and cinnamon.

D. Milk and cream.

Match each invention or discovery with the correct person. Write the correct name from the box. Names: Coenraad van Houten / Daniel Peter / Fry and Sons

31. Invented a **press** to separate **cocoa butter** from cacao beans. **Coenraad van Houten**

> **Questions 32 to 36** were not in the screenshots, so no answers are given here. Send them and they will be added.

Do the following statements agree with the information given in Passage 3? Write TRUE, FALSE, or NOT GIVEN.

37. **Milk chocolate** is currently the **most popular form** of chocolate in the world. **TRUE**

Answer the questions below using NO MORE THAN THREE WORDS from Passage 3.

38. What are the **seeds** of the cacao tree **commonly known as**? **cacao beans**

39. Who first **brought chocolate to Europe**? **Spanish explorers**

40. What **environmental** problem has been caused by the **demand for cocoa** in some regions? **deforestation**
